

Incident Response Services

Strengthen your IT resilience

Reduce response time and incident impact

The complexity and sophistication of cyberattacks on companies is continually increasing, and existing security solutions often cannot provide sufficient protection. Even IT administrators can barely protect their company networks from such attacks. When every second counts, you need a strong partner at your side who can help you quickly assess the threat and take action.

ESCRYPT has extensive experience in operating Cyber Defense Center Services for the automotive industry. For example, we protect the Bosch Group's corporate and production IT. Our suite of proactive and reactive incident response services delivers the visibility and threat intelligence you need to help prepare, respond, and recover from a breach.

Assessment services

Proactive incident response

Are your IT systems currently breached? Malware and persistent threats often reside within an organization for months, sometimes years, before being detected. We deliver proactive one-time assessments to identify hidden compromised systems and detect threats that have bypassed your cyberdefenses and detection controls.

- IR Readiness check
- Compromise assessment

Emergency services

Reactive incident response

Together with you, we define the arrangements that will save you valuable time and money in the event of an emergency. You will receive an initial assessment of the threat together with recommendations for immediate action. A team of our experts will support you in the clarification, containment, and clean-up. We will then prepare a comprehensive report on the activities and findings.

- Forensics as a service
- Remediation as a service

Consulting services

Strategic incident response

You will benefit from expert consulting, employee training, and workshops on all aspects of incident response. Together we will develop a security strategy that will strengthen the cyberresilience of your company in the long term.

- IR strategy consulting
- Workshops on various topics, e.g. evidence collection, forensic analysis, threat hunting, THOR-APT scanner
- Employee training courses

Our services at a glance

IR readiness check

Evaluation of existing incident response capabilities with a focus on structural and process organization. An IR readiness check delivers detailed insights into your incident response posture and our recommendations for improvement.

Compromise assessment

Scanning and analysis of a predefined number of customer systems on the basis of a partially automated, tool-based approach. Not only does this identify ongoing or past intrusions, but it also assesses risk by identifying weaknesses in your security architecture. In addition, we can detect vulnerabilities, improper use, and system security misconfigurations. All of this helps increase your ability to respond effectively to future incidents.

Forensics as a service

IT forensics is the core competence in a computer security incident. Only those who can fully determine what has happened can derive appropriate measures. The specific security incident is reconstructed, the attacker is traced, and affected systems are identified. Experts provide immediate assistance and provide the IT team with on-site or remote support. You will receive an expert report that can be used in court and detailed recommendations for action to avoid future incidents.

Remediation as a service

Our experts provide an analysis of possible remedial strategies to determine the most efficient and cost-effective options for your organization. We support you in setting up a remediation project after a detected attack. Based on a tested and proven remediation process framework, we develop the project structure, then define and conduct appropriate measures including on-site support for the remediation and implementation of quality assurance measures.

Incident response consulting and training

Take advantage of our expertise and many years of experience. Our experts offer advice in all aspects of the incident response cycle and related methodologies, analytics, and tools. In addition, we provide your IT team with skills through training events and workshops specially developed for your company.

Your benefits

- ✓ **Frontline expertise:** ESCRYPT has been on the front line of cyber incident response for many years in the automotive industry.
- ✓ **High availability of our experts:** we are there when you need us and we will give priority to your incident.
- ✓ **Recognized excellence:** a wealth of experience in investigating and resolving security breaches – from individual systems to company-wide attacks.
- ✓ **Field-proven solutions:** we provide tested and proven solutions to strengthen the overall resilience of your enterprise IT systems.
- ✓ **Frontline expertise:** ESCRYPT is **qualified APT response service provider** (BSI) and has been on the front line of cyber incident response for many years in the automotive industry.
